

CROSS AUGER CLUTCH SHUT-OFF SYSTEM

Lankota's Grain Tank Cross Auger Clutch Shut-Off System is about taking preventive measures to reduce downtime and costly repairs. This system allows the combine operator to disengage the cross augers so the main unloading auger can be emptied. It eliminates up to 2,000 lbs of grain remaining in the combine unloading auger. The electromagnetic clutches are operated by a hands-free, foot switch in the cab. This system is designed for simple installation and optimum accessibility on John Deere® Combines.
